Proofable | Beta

Proofable is a framework for certifying digital asset to public Blockchains. Anchor millions of digital assets quickly and economically in a single transaction. Proofable certificates can be used to detect tampering or to prove the integrity and origin of any digital assets such as legal documents, financial instruments, intellectual property, and more.

Proofable includes

CLI
A command line interface to prove files.

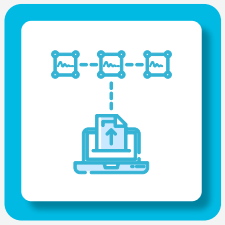
SDK
Powerful SDK for JavaScript, GoLang and more to come.

gRPC
Modern gRPC wire protocol for integration into any language.

Key features and benefits

- Prove ownership of digital assets such as intellectual property or digital media
- Prove timestamps for legal, accounting or financial records
- Prove records are are not tampered with or falsified
- Anchor millions of digital assets in a single Blockchain transaction
- Highly efficient trie data structure allows for incremental updates and hierarchical proof structures
- Support for Bitcoin, Ethereum, Hashgraph, Elastos, Go Chain, and an increasing number of other Blockchains

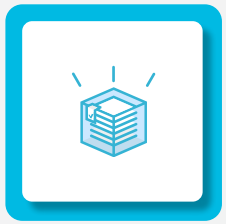
How Proofable works



1. Create a trie structure containing up to millions of digital asset signatures.

2. Anchor the trie to a public Blockchain using a single API call.

3. Generate certificates from the trie that forever prove the integrity and origin of all or some of the digital assets.



4. Verify the integrity and origin of the digital assets with the certificates at any time.

> **[Blockchain] is revolutionary and has the potential to revolutionize nearly every industry.**

Innovate with Proofable

- Financial Services
- Cyber Security
- Government Regulation and Compliance
- Accounting and Record Keeping
- Legal Document Management and Intellectual Property
- Supply Chain and Asset Management
- Innovate Your Industry
- Create Your Solution
