

ProvenDB Compliance Vault Now Available on Microsoft AppSource

Melbourne, Victoria, Australia - June 15, 2020 - ProvenDB, a trusted data integrity solution, today announced the availability of ProvenDB Compliance Vault on Microsoft AppSource, an online cloud marketplace providing tailored line-of-business solutions.

ProvenDB provides data security and database management solutions to prevent tampering and manipulation of databases, data, and documents. ProvenDB solutions integrate traditional database and application technologies with blockchain technology to guarantee the origin, ownership, versioning, integrity and security of data.

ProvenDB Compliance Vault is a cost-effective software solution that provides a tamper-resistant digital store for critical compliance documentation. The ownership and creation date of information stored in ProvenDB Compliance Vault can be definitively proven by stringent industry-standard cryptography. With ProvenDB Compliance Vault, you can be certain that your compliance documentation will satisfy the most rigorous compliance audit.

Once anchored to the public blockchain, the signatures form an impeccable and irrefutable proof of document state and creation date. The blockchain record – which cannot be altered by any known technology – proves the overall integrity and timestamp of items in the vault, eliminating any possibility of undetected tampering or backdating.

Documents held within ProvenDB Compliance Vault, therefore, meet regulatory compliance, guaranteeing the integrity of compliance documentation for external and internal reporting purposes:

- Irrefutable proof of the origin date of the document
- Non-repudiation of documents
- Audibility and transparency of all alterations
- Complete tamper detection

This solution is for any business or industry where regulators require impeccable data integrity standards. ProvenDB Compliance Vault enables companies to prove with 100 percent certainty that the documents held within their organization are trustworthy and reliable.

"The most common issue for regulated industries is not evidence of non-compliance; rather, it's an inability to prove compliance," said Guy Harrison, founder and CTO at ProvenDB. "Integrating traditional database systems with blockchain technology guarantees the highest level of proof for data. We're delighted to be part of the AppSource ecosystem!"

Kirsten Edmondson Wolfe, Senior Director, AppSource Product Marketing, Microsoft Corp. said, "We're pleased to welcome ProvenDB to Microsoft AppSource, which gives our customers access to the best solutions available from our extensive partner ecosystem. Microsoft AppSource offers partner solutions such as Compliance Vault from ProvenDB to help customers meet their needs faster."

About ProvenDB

ProvenDB is a technology provider of data security and information management solutions. Since the emergence of digital media, information sources have become increasingly untrustworthy. ProvenDB was founded in 2016 by Guy Harrison and Vinny Smith to solve this issue by creating reliable sources of information. ProvenDB's blockchain-integrated technology guarantees the integrity, date and origin of data. ProvenDB works with financial services, governments, technology providers, and startups to create trust between businesses, consumers, regulators and governments.
