ProvenDB

ProvenDB is a data management solution that leverages Blockchain technology to guarantee that your data hasn't been hacked or manipulated. This provides proof of the integrity ownership and creation date of critical information.

We work with regulated industries, including financial services, government, healthcare, legal, and accounting. These industries all require impeccable data integrity to prove their information is accurate and reliable.

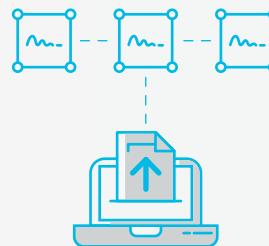

In our digital landscape, constant issues of fabrication, tampering, and destruction of documents are eroding our trust in information. The damaging effects of breaches in trust for companies are severe, often resulting in legal action, fines, and long-lasting damage to reputation.

ProvenDB allows you to:

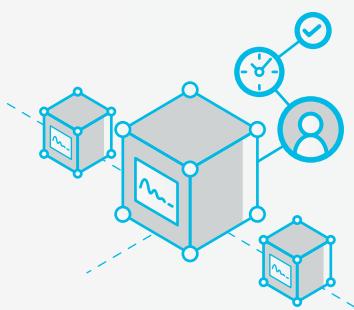

- ✓ Prove ownership of intellectual property
- ✓ Prove timestamps for legal instruments
- ✓ Prove that database records have not been falsified or tampered with
- ✓ Create a log of all document changes

How does ProvenDB work?

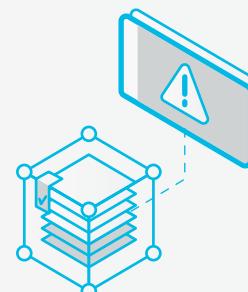

1. When information is added to ProvenDB, digital signatures are created and posted to an immutable Blockchain.

2. These signatures prove the integrity, ownership, and creation date of the information.

3. The integrity of your data is guaranteed, providing you with the proof you need.

Features

- ✓ MongoDB-compatible document format.
- ✓ Complete history of document changes.
- ✓ GDPR 'right to be forgotten' compliant.
- ✓ Generate database and document proofs.
- ✓ Data exportable as an independent, provable archive.
- ✓ Connects to existing infrastructure through industry-standard APIs.
- ✓ Includes a user-friendly document management system.
- ✓ Supports multiple Blockchains, including Ethereum, Bitcoin and Quorum.

“**76% of respondents worry about false information or fake news.**”
